## Our Demands on the Politicians:

- Respect the interests, needs, wishes and safety of the voters and consumers as well as take the necessary precautions so that gene technology does not land on our fields or plates.
- Make every effort for an environmentally-friendly and healthy food production, the purpose of which is the development of ecological breeding methods.
- Do not promote such extreme methods as gene technology that disregard natural barriers, for example, the exchange of genes between animals and plants.
- Tighten the Gene Technology Law instead of loosening it: do not dilute the liability provisions.
- Immediate introduction of compulsory labelling for products where the animals have been fed genetically modified plants, so that labelling is recognisable for consumers.
- Guarantee that consumers can continue to purchase food that is free of gene technology.

## Our Demands on the Farmers:

- Give your animals fodder that is free of gene technology.
- Do not grow plants that have been modified by gene technology.

## Our Demands on the Scientists:

- Commitment to food production that is safe, healthy, natural and unadulterated. It is not acceptable that scientists place the interests of the gene-technology industry above those of our health and environment by focusing on development of questionable animal fodder and food.
- Stop playing dangerous games with our basic food supply!

## Our Demands on the EU

- Immediate end to support of farming and import of genetically modified animal fodder and food.

**We call for reforms and transparency in the structure of the WTO (World Trade Organization) and the EFSA (European Food Safety Authority), as well as urgent reforms that place protection of health and environment above commercial interests.**

**The World Trade Organization cannot force gene food on us!**

**“Nature can survive well without human beings,  
but human beings not without nature.”  
(n-a-h-r-u-n-g-s-k-e-t-t-e)**
